Overview of Six Sigma

Six Sigma is a widely accepted quality concept in the corporate world. It is a data driven, customer focused, and result oriented methodology which uses statistical tools and techniques to systematically eliminate defects and inefficiencies to improve processes.

Six Sigma started its journey in the 1980s as a data driven method to reduce variation in electronic manufacturing processes in Motorola Inc. in the USA. Six Sigma became famous when Jack Welch made it vital to his successful business strategy at General Electric in 1995. Today it is used as a business performance improvement methodology all over the world in diverse industry including general manufacturing, construction, banking and finance, healthcare, education, government, KPO/BPO, IT/ Software. At present IT/ ITES sector companies are dynamically implementing Six Sigma and it is no more confined into manufacturing sector only.

The term 'Six Sigma' comes from statistics and is used in statistical quality control (SQC) which evaluates process capability i.e. the numerical measure of the ability of a process to meet the customer specifications. A Six Sigma process is the one which produces 99.99966% statistically defect-free outputs which is equivalent to 3.4 defects per million opportunities (DPMO).

Six Sigma vs Traditional Quality Management

Key benefits of using Six Sigma:

- Six Sigma helps companies to reduce cost and improve productivity
- Six Sigma improves quality of project outputs by reduction of inefficiencies and defects.
- Six Sigma increases customer satisfaction and loyalty
- Certified Six Sigma Professionals can help to increase ROI significantly.

Six Sigma vs Traditional Quality

Six Sigma	Traditional Quality Management
Decisions are driven by data	Decisions are taken based on a combination of data and 'gut feel'.
Control process inputs (Focus on X's)	Inspection method (Focus on Y)
Structured use of statistical tools to help in problem solving	No formal structure exists for the application of tools
Structured training in applied statistics	Lack of structured training
Root cause approach	Band aid approach
Prevention over inspection	Inspection over prevention

Six Sigma Characteristics

- Customer centric
- Process focused
- Data driven
- Involvement and support of the top management
- Cultural change
- Breakthrough performance gains
- Structured improvement deployment
- Validation through key business results
- Reduction in variation
- Elimination of defects
- Improvement in yield
- Enhancement in customer satisfaction
- Strengthening of the bottom line

Who is Using Six Sigma

All leading companies in the world use Six Sigma

Six Sigma has come a long way since its inception in the mid 80's. In the present day, Six Sigma is one of the most widely applied methodologies for improvement projects globally. Also, the widespread increase in the demand for certified Six Sigma professionals is a testimony to the fact that Six Sigma is here to stay.

Before, 1987, Six Sigma was solely a statistical term. Since then, the Six Sigma crusade, which started at Motorola, has spread to other companies who are continually striving for excellence. Over the last two decades it has evolved from a problem-solving technique to a quality strategy and ultimately into a sophisticated quality philosophy. After GE's Jack Welch made it a central focus of his business strategy in 1995, looking at the success, all other leading companies started following the trend. And today, Six Sigma is the fastest growing business management system globally.

GE and Dow have been using Six Sigma for new product development and customer support to reduce costs, improve performance, and increase profitability

Citi bank uses Six Sigma to reduce variability in cycle times, error rates, costs, "days to pay" of accounts payable, and improve employees' productivity ratios.

Accenture uses Six Sigma to eliminate waste and become faster and more responsive to its customers, driving revenue growth.

Who is Using Six Sigma

The figure below shows that Six Sigma is not only adopted by manufacturing companies. Six Sigma is increasingly being applied outside of the traditional manufacturing industry because of its inherent benefits. Today's competitive environment leaves no room for error. We must delight our customers every time and relentlessly look for new ways to exceed their expectations. Six Sigma plays a huge role in doing so irrespective of industry.

Many say that Six Sigma is only for large companies where they follow lot of processes. However, survey conducted by 6sigmastudy revealed that it is equally adopted by small to medium sized organizations as well. The figure below shows the distribution of companies by employee count.

Why 6sigmastudy

	6sigmastudy™ Six Sigma Certifications	Other Six Sigma Certifications
1. Biggest accreditation body for Six Sigma certifications	6sigmastudy™ is the biggest accreditation body for Six Sigma certifications. 6sigmastudy™ has the largest Authorized Training Partner (A.T.P.) network of 2,100+ partners in 90+ countries.	Other Six Sigma accreditation bodies are smaller and not as well-recognized as 6sigmastudy™.
2. Students from 25,000+ companies in 150+ countries	VMEdu® / 6sigmastudy™ has trained/certified more than 750,000 students in delivering successful Six Sigma projects. More than 5,000 students are certified by 6sigmastudy™ each month which is more than any other certification body. Employees of 25,000+ companies from 150+ countries have enrolled with 6sigmastudy™/VMEdu®.	Other Six Sigma accreditation bodies are not as popular or as widely accepted.
3. Industry-wide acceptance	The knowledge gained by getting a 6sigmastudy™ certification is universal in its application and has been applied by organizations in diverse projects spanning an eclectic mix of industries.	Other Six Sigma certifications are not accepted in all industries. Most of the time the learning from these certifications applies only to specific industries.
4. Established name in Six Sigma certifications	Training for 6sigmastudy™ certifications are provided by Authorized Training Partners (A.T.P.s) globally. With more than 2,100+ A.T.P.s globally, 6sigmastudy™ has the widest network of accredited training companies offering its certifications. 6sigmastudy™ certifications are widely reputed and accepted by various Fortune 500 companies such as Apple, IBM, HP, Bank of America, AT&T, Dell, Verizon, Lockheed Martin, and PepsiCo.	Other Six Sigma certification companies conduct their training through a much smaller network of trainers or training companies, and do not have the same level of credibility in the market that 6sigmastudy™ has.
5. Active Discussions to share and learn	6sigmastudy™ engages the Six Sigma/Lean and Quality Management community through active discussions on LinkedIn, Twitter, Facebook, multiple Discussion Forums and Blogs. The 6sigmastudy™ LinkedIn Group is the most active Group for Six Sigma on LinkedIn.	Usually, other certification providers do not have such high activity discussion forums to engage their community.
6. Multiple free resources for Six Sigma Community	6sigmastudy™ provides a wide range of free resources such as 5+ hours of high-quality videos, useful case studies, interactive mobile apps, blogs, and articles, thereby contributing to the increased awareness of Six Sigma in the Six Sigma communities.	No other Six Sigma Certification provides high quality content and free resources to students in multiple formats. The main focus of such certification providers is to get students to their paid classes, rather than help students succeed with best practices.

Why 6sigmastudy

	6sigmastudy™ Six Sigma Certifications	Other Six Sigma Certifications
7. Free "Six Sigma Yellow Belt" - SSYB™ Course	Through its free Six Sigma Yellow Belt (SSYB™) Course, 6sigmastudy™ not only introduces Six Sigma concepts to professionals but also helps them get an introductory certification for free. This free certification includes approximately 10 hours of free online self-study through videos, case studies, and guides. The free SSYB™ certification is a great way to introduce Six Sigma to all employees in your organization.	Other Six Sigma certifications usually do not provide any free resources or help for students to get a basic idea of Six Sigma concepts. In most cases, professionals are required to pay upfront before even getting their first lesson on Six Sigma.
8. Credible and standard testing environment	With an emphasis on providing candidates with a reliable and credible testing environment, we conduct our certification exams using our live online proctoring system unlike other certifying bodies. This allows you to take your certification exams from the comfort of your home. All exams will be proctored live and videos of the exams will be recorded and reviewed by our assessment team.	Other Six Sigma certifications do not have a standardized examination. Most of them only require candidates to be present for a workshop and take a test, the result of which has no bearing on whether the candidate qualifies for the certification. These kinds of certifications never have the credibility companies require to select candidates for key roles.
9. Teaching methodology	6sigmastudy™ A.T.P.s use a scientifically proven and highly interactive teaching methodology including role-plays, case studies, and simulations explaining the key Six Sigma concepts for their Six Sigma certification courses. To ensure an enriching learning experience for all our students, each trainer associated with a 6sigmastudy™ A.T.P. is required to be an accredited 6sigmastudy Certified Trainer (SSCT®).	Other Six Sigma certification “workshops” are actually lectures. They are not engaging or interactive and most of the times involve delegates (sometimes more than 50 in a class) hearing an instructor for hours without any structured role plays or case studies.
10. Experienced 6sigmastudy™ trainers	Any person who is qualified as a 6sigmastudy Certified Trainer (SSCT®) undergoes a rigorous assessment process and he or she has to exhibit proficiency in the concepts of Six Sigma. All trainers are required to successfully pass three 6sigmastudy™ certification exams before they can be eligible to teach. Moreover, all feedback from students about their respective trainers is reviewed and all 6sigmastudy™ trainers regularly participate in "Train-the-Trainer" sessions, which help them understand the nuances of our certifications and further cement their understanding of the Six Sigma methodology.	Usually, other Six Sigma Certifications do not have such strict requirements for trainer accreditation, and thus the quality of their instructors may not be very high.
